Examiner's Amendment and Statement of Reasons for Allowance

1. This action is responsive to Applicant's amendment after final filed December 28, 2004 and interview with Applicant on January 23, 2006.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Vahid Sharifi, Registration Number 45,828, on March 31, 2006 for obviating any potential 101 issues and put the claims in condition for allowance. Claim 15 is amended as following; please also see an attached facsimile dated 3/31/2006.

4. Claim 15. (Currently amended) A method of uninstalling an application implemented at least in part by a computing device comprising:

breaking a dependency between a first executable application and a second executable application, the dependency being created in part via an accessor component, the accessor component facilitates relating information across different domains, via at least one of a resolve and link for values associated with a bind of the first executable application and the second executable application;

removing all application registrations from central storage location;

removing program components; and

notifying dependant applications.

-- END --

Examiner's Statement of Reason(s) for Allowance

5. Claims 1-8, 10-20, 22-24 are allowed.

6. The following is an examiner's statement of reasons for allowance:

The prior arts of record: **Microsoft XP**, teaches a dynamically extending application preference classes system, which allows user to extend a preference class by simply editing the extension data file (EDF). **Accessor** ("Algorithm Solutions Software GmbH") teaches 'constant accessor'. New art made of record: U.S. Patent 6,850,893 by **Lipkins et al.**, teaches an improved method and apparatus for an improved security system mechanism in a business applications management system platform that defines sets of allowed operations that groups of users can perform across multiple domains, thus minimizing user input effort. However, none of them, taken alone or in combination, teaches 'an accessor component facilitates relating information across different domains' as recited in the 01/23/06 REMARKS pp. 6-7; teaches the limitations of a method for a system for dynamically extending application preference classes comprising: a first executable application including functions that are registered in a registry component; an extension component that reads function data from the registry component and binds a second executable application to the first executable application, wherein second application preference class declarations are bound to the functions provided by the first executable application, and an accessor component that facilitates relating information across different domains, via at least one of a resolve and link for values associated with a bind of the first executable application and the second executable application in such a manner as recited in the independent claim 1; and a method for extending application preference class functionality comprising: receiving an extension data file (EDF) containing information about candidate function bindings; registering one or more function bindings in a central data store; binding a function of a first executable

application to a preference class of a second executable application utilizing binding function information located in the central data store, and resolving a value via an accessor component across a plurality of domains as recited in the independent claim 12; and a method of uninstalling an application comprising: breaking a dependency between a first executable application and a second executable application, the dependency being created in part *via* an accessor component, the accessor component facilitates relating information across different domains, via at least one of a resolve and link for values associated with a bind of the first executable application and the second executable application; removing all application registrations from central storage location; removing program components; and notifying dependant applications, as recited in the independent claim 15.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
